

Common Commit Message Prefixes

General Categories

- **FEAT:** → Introduces a new feature.
- **FIX:** → Fixes a bug.
- **BUG:** → Addresses a specific bug.
- **DOC:** → Updates documentation.
- **STYLE:** → Changes that do not affect the meaning of the code (formatting, missing semi-colons, etc.).
- **REFACTOR:** → Code changes that neither fix a bug nor add a feature.
- **PERF:** → Performance improvements.
- **TEST:** → Adds or modifies tests.
- **CHORE:** → Miscellaneous tasks like build process updates, package manager updates, etc.

Git-Flow Inspired Prefixes

- **INIT:** → Initial commit.
- **HOTFIX:** → Quick patch to fix a critical issue.
- **MERGE:** → Merge branches.
- **RELEASE:** → Tagging a release version.

Other Common Conventions

- **SECURITY:** → Fixing security vulnerabilities.
- **CONFIG:** → Changes in configuration files.
- **WIP:** → Work in progress, not ready for merging.
- **REVERT:** → Reverting a previous commit.

- **BUILD:** → Changes that affect the build system or external dependencies (npm, yarn, pip, etc.).
- **CI:** → Continuous Integration changes.
- **DEPLOY:** → Deployment-related updates.
- **DEPRECATE:** → Marks code or features as deprecated.
